PROFESSIONAL SUMMARY

Computer Science (AI) undergraduate with hands-on experience building full-stack web applications, RESTful APIs, and intelligent data systems. Proficient in Python (Django, Flask), JavaScript (React.js, Node.js), and MySQL. Demonstrated expertise in developing NLP resume scoring pipelines, designing relational database schemas, and engineering real-time computer vision models. Seeking an entry-level Python Developer, Software Developer, Full-Stack Developer, or AI/ML Engineer role.

EDUCATION

Parul University **2022 – 2026**
Bachelor of Technology in Computer Science and Engineering (AI Specialization) **CGPA: 7.64 / 10**

TECHNICAL SKILLS

Programming Languages: Python, Java, C, JavaScript (ES6+), SQL
Backend & Frameworks: Django, Flask, Node.js, Express.js, REST APIs, JWT Authentication
Frontend Technologies: React.js, HTML5, CSS3, JavaScript, Responsive UI Design
Databases & Architecture: MySQL, MongoDB, Relational Database Design, CRUD Operations
AI / Data Science: OpenCV, YOLO, CNN, NLP (NLTK, TextBlob), scikit-learn, NumPy, Pandas
Developer Tools & Testing: Git, GitHub, VS Code, Postman, Maven, Agile/Scrum Principles

INTERNSHIP EXPERIENCE

Aenexz Tech Pvt. Ltd. **Jan 2026 – Apr 2026**
AI & ML Intern Bengaluru, India

- Engineered an automated AI Resume Parser and screening pipeline in Python using NLP techniques to extract structured candidate information from unstructured PDF and Word documents.
- Implemented text preprocessing workflows including tokenization, stop-word filtering, and regular expression pattern matching to extract technical competencies, contact details, and qualifications.
- Utilized scikit-learn and NLTK for feature extraction and similarity ranking, mapping candidate profiles against target job descriptions to streamline technical recruiter screening.

Talent Lad **Feb 2024 – May 2024**
MERN Stack Developer Intern Remote

- Developed dynamic, responsive user interface components using React.js, HTML5, and CSS3, ensuring cross-browser compatibility and optimized rendering performance.
- Built and integrated RESTful API endpoints using Node.js and Express.js to facilitate asynchronous client-server communication and JSON payload processing.
- Designed MongoDB collections, implemented schema validation and CRUD operations, and collaborated with peers via Git/GitHub for branch management and code reviews.

FEATURED PROJECTS

AI-Based Resume Parser and Candidate Screening System *Python, NLP, NLTK, scikit-learn, RegEx*

- Built an automated Python parsing engine using NLP, NLTK, and RegEx to extract candidate contact info, technical skills, and education from PDF/DOCX resumes into structured JSON.
- Implemented TF-IDF feature extraction and cosine similarity via scikit-learn to semantically evaluate and rank applicant resumes against target job descriptions.

Fundraiser and Crowdfunding Web Platform *React.js, Node.js, Express.js, MongoDB, REST APIs*

- Engineered a full-stack MERN application supporting user campaign creation, donor contribution logging, and real-time fundraising goal visual tracking.
- Developed responsive React components with client-side state management, integrated Express.js RESTful endpoints, and structured MongoDB data models via Mongoose.

AI-Enhanced Real-Time Object and Color Detection System *Python, OpenCV, YOLO, CNN, NumPy*

- Built a real-time computer vision pipeline in Python utilizing YOLO and CNN models to detect and localize multi-class objects across live webcam feeds.
- Implemented HSV color space masking and NumPy vectorization to accurately identify primary color distributions with low-latency bounding-box rendering.

CERTIFICATIONS & ACHIEVEMENTS

Certifications:

- Python Essentials 1 & 2 (Cisco Networking Academy)
- Database and SQL (Infosys Springboard)
- Frontend Developer (Simplilearn)

Achievements: Successfully engineered and delivered production-grade full-stack and AI software solutions across two industry internships, with deployments spanning MERN web architectures and NLP evaluation pipelines.
